All rights reserved.

No part of this publication may be excerpted, reproduced, translated or utilized in any form or by any means, electronic or mechanical, including photocopying and microfilm, without the prior written permission of ZTE Corporation.

is the registered trademark of ZTE Corporation. All other trademarks appeared in this manual are owned by the relevant companies.

ZTE Corporation reserves the right to make modifications on print errors or update specifications in this manual without prior notice.

ZTE Corporation keeps the right to make the final explanation to this manual.

With strong technical force, ZTE Corporation can provide CDMA/GPRS module customers with the following all-around technical support:

- 1. Provide complete technical documentation;
- 2. Provide the development board used for R&D, test, production, after-sales, etc.
- 3. Provide evaluations and technical diagnosis for principle diagram, PCB, test scenarios;
- 4. Provide test environment;

ZTE Corporation provides customers with onsite supports, and also you could get supports through telephone, website, instant communication, E-mail, etc.

The module website module.ztemt.com.cn provides the relevant industry information and module technical documentation. The authorized module customers could download the latest technical documentation from our website. If you have more requirements, you could send an E-mail to module@zte.com.cn. You can also call us at 0755-86360280 for technical support.

# **Preface**

### **Target Readers**

This manual is mainly applicable for the following engineers:

- System designing engineers
- Hardware engineers
- Software engineers
- Test engineers

# **Update History**

• V1.1

Completely follow MG2636 AT command Set user manual.

V1.2

Completely follow ME3000\_V2 AT command Set user manual.

V1.3

Modify the previous documents and make them further standardized; Delete Relay station Command and Transparent transmission Command;

# Contents

		2.1.26	S *TSIMINS: check SIM card status	22
		2.1.27	7 +CPWD: change password	23
		2.1.28	3 +CGMI: inquire manufacturer's information	23
		2.1.29	9 ATZ: reset	23
		2.1.30	) +CSCS: character set selection	24
		2.1.31	+CLCC: check call status	24
	2.2	DTMF	Command	26
		2.2.1	+VTS: send DTMF	26
	2.3	Netwo	ork Service Command	27

	2.3.1	+CREG: network registration and roaming	27
	2.3.2	+COPS: network selection	27
2.4	Mobile	Device Control and Status Report	29
	2.4.1	+CPAS: check module's status	29
	2.4.2	+CFUN: set module's function	29
	2.4.3	+CMEE: mobile equipment errors	29
	2.4.4	+ZPWROFF: power off	30
	2.4.5	+CPIN: input PIN	30
	2.4.6	+CSQ: check signal strength	30
	2.4.7	+CCLK: clock management	31
2.5	Messa	ge Service Command	32
	2.5.1	+CSCA: SMS center number	32
	2.5.2	+CNMA: message acknowledgement	32
	2.5.3	+CMGF: SMS mode	32
	2.5.4	+CNMI: message indication	33
	2.5.5	+CMGR: message read	35
	2.5.6	+CMGW: message write	36
	2.5.7	+CSMS: select SMS service	36
	2.5.8	+CMGS: message send	37
	2.5.9	+CPMS: preferred message storage	38
	2.5.10	+CMGD: message delete	39
	2.5.11	+CMGL: message list	40
	2.5.12	+CMSS: messages saved in SIM card	42
	2.5.13	+ZSMGS: message full indication	42
2.6	Phone	book Commandbook Command	43
	2.6.1	+CPBS: phonebook storage	43
	2.6.2	+CPBR: phonebook read	43
	2.6.3	+CPBW: phonebook write	44
	2.6.4	+CPBF: phonebook find	45
	2.6.5	+CNUM: owner's number	46
2.7	Data C	Compression Command	47
	2.7.1	+IFC: flow control	47
	2.7.2	&D: set DTR mode	47
	2.7.3	&C: set DCD mode	47
	2.7.4	+IPR: set module's baud rate	47
	2.7.5	&F: restore factory settings	48
	2.7.6	&W: save settings	48
2.8	GPRS	Command	49
	2.8.1	+CGDCONT: set PDP	49
	2.8.2	+CGACT: activate/deactivate PDP	49
	2.8.3	+CGATT: set GPRS	49
	2.8.4	+CGCLASS : GPRS device class	50
2.9	ZTE E	xclusive Commands	51
	2.9.1	+ZGPIO: read/write GPIO	51
	2.9.2	+7STR: check module's status	51

	2.9.3	+ZGETICCID: set ICCID	51
	2.9.4	+ZCSQ: set auto display CSQ	52
	2.9.5	+ZEDT: set DTR inspection mode	52
	2.9.6	+ZDSLEEP: 32KHz Deep sleep mode	53
	2.9.7	+CUSD: send USSD data	53
	2.9.8	+ZRINGPINMODE: set RING PIN signal mode	55
2.10	) Netwo	rk Parameter Commands	56
	2.10.1	+ZPNUM: set APN, username and password	56
	2.10.2	+ZPPPOPEN: open GPRS connection	56
	2.10.3	+ZPPPCLOSE: close GPRS connection	56
	2.10.4	+ZIPGETIP: check current IP address	56
	2.10.5	+ZDNSSERV: set DNS IP address	57
	2.10.6	+ZDNSGETIP: obtain Internet Domain name's IP address	57
2.1	1 TCP L	ink Commands	58
	2.11.1	+ZIPSETUP: Set up TCP server link	58
	2.11.2	+ZIPSEND: send TCP data to target address	58
	2.11.3	+ZPPPSTATUS : check GPRS connection status	58
	2.11.4	+ZIPCLOSE: close TCP link	59
	2.11.5	+ZIPSTATUS : check current TCP link status	59
	2.11.6	+ZIPRECV: receive data from current data link	59
2.12	2 UDP L	ink Commands	60
	2.12.1	+ZIPSETUPU: set up UDP server link	60
	2.12.2	+ZIPSENDU: send data to UDP server	60
	2.12.3	+ZIPSTATUSU : check UDP status	60
	2.12.4	+ZIPCLOSEU: close UDP link	61
	2.12.5	+ZIPRECVU: receive UDP data	61
2.13	3 Server	Commands	62
	2.13.1	+ZTCPLISTEN: set port monitoring	62
	2.13.2	+ZTCPSENDP: send data through passively opened link	62
	2.13.3	+ZTCPCLOSEP: close monitored connection	63
	2.13.4	+ZTCPRECV(P): receive data report	63
	2.13.5	+ZTCPSTATUSP: check passively opened link	64
	2.13.6	+ZIPTIMEOUT: set the timeout for connecting the server & sending data	64
	2.13.7	+ZTCPTIMEOUT: set the timeout for receiving data	65
2.14	4 FTP C	ommands	66
	2.14.1	ZFTPLOGIN: log in FTP server	66
	2.14.2	ZFTPTYPE: set FTP file type	66
	2.14.3	ZFTPUPLOAD: upload files	67
	2.14.4	ZFTPDNLOAD: download files	67
	2.14.5	ZFTPDEL: delete files	68
		ZFTPQUIT: quit FTP	
2.1	5 Releva	ant Audio Commands	70
	2.15.1	+ZCALLTONE: set pick-up tone	70
	2.15.2	+ZDTMFTONE: set ZDTMF tone	70
	2.15.3	+SPEAKER: audio channel switch command	71

	2.15.4 +ZMICGB: set MIC audio parameters	.71
3	Application Cases and Precautions	74
	3.1 SMS Application Case	.74
	3.2 Phonebook Application Case	.75

### 1 General Description

### 1.1 Description of AT Commands

MG2639 provides AT command interfaces, through which the module could communicate with the external devices conveniently. The AT commands set provided by MG2639 module not only covers the standard GSM voice call and SMS applications, but adds some other commands based on GSM specification and some ZTE exclusive commands for users to use conveniently.

#### 1.1.1 Type of AT Commands

As a standard interface, the returned values and syntax of AT commands are both fixed. As a whole, the AT commands could be divided into four types:

- Without parameter: a type of simple commands; Syntax: AT[+|&]<command>,e.g.: AT+CSQ, AT&W
- Query: used to inquire the current setting value; Syntax: AT[+|&]<command>?, e.g.: AT+CNMI?
- Help: used to list the possible parameters of the command; Syntax: AT[+|&]<command>=?, e.g.: AT+CMGL=?
- Parameter: a kind of mostly common syntax, which provides strong flexibility to the command,
   Syntax: AT[+|&]<command>=<par1>,<par2>,<par3>...

The returned values of this type of commands are all the same. This will be clarified in details later.

The basic frame of the returned value is:

<CR><LF><Response string><CR><LF>

<CR><LF><OK/ERROR>[ERROR INFO]<CR><LF>

#### 1.1.2 Returned Syntax of AT Commands

The following describes the AT commands and returned descriptions supported by MG2639 module:

- AT command returned syntax:
- --<CR><LF><corresponding strings ><CR><LF>
- --An exceptional case: e.g.: AT+ZPOWEROFF, directly return with "OK"
- AT command status report (OK, ERROR):
- --If there is error in AT command syntax, return with "ERROR";
- --If AT command executes successfully, return with "OK";

#### 1.1.3 AT Command Syntax

- AT command starts with "AT" and ends with <CR>;
- After the module runs, the serial port default setting will be: 8-digit data bit, 1-digit stop bit, no parity check, no CTS/RTS, data rate 115200bps.

# 1.2 Abbreviations

Α		
ADC	Analog-Digital Converter	
AFC	Automatic Frequency Control	
AGC	Automatic Gain Control	
ARFCN	Absolute Radio Frequency Channel	
	Number	
ARP	Antenna Reference Point	
ASIC	Application Specific Integrated	
	Circuit	
В		
BER	Bit Error Rate	
BTS	Base Transceiver Station	
С		
CDMA	Code Division Multiple Access	
CDG	CDMA Development Group	
CS	Coding Scheme	
CSD	Circuit Switched Data	
CPU	Central Processing Unit	
D		
DAI	Digital Audio interface	
DAC	Digital-to-Analog Converter	
DCE	Data Communication Equipment	
DSP	Digital Signal Processor	
DTE	Data Terminal Equipment	
DTMF	Dual Tone Multi-Frequency	
DTR	Data Terminal Ready	
E		
EFR	Enhanced Full Rate	
EGSM	Enhanced GSM	
EMC		
EMI	Electro Magnetic Interference	
ESD	Electronic Static Discharge	
ETS European Telecommunication		
Standard		
F		
FDMA	Frequency Division Multiple Access	

FR	Full Rate	
G		
GPRS	General Packet Radio Service	
GSM	Global Standard for Mobile	
	Communications	
Н	,	
HR	Half Rate	
I	,	
IC	Integrated Circuit	
IMEI	International Mobile Equipment	
	Identity	
ISO	International Standards Organization	
ITU	International Telecommunications	
	Union	
L		
LCD	Liquid Crystal Display	
LED	Light Emitting Diode	
M		
MCU	Machine Control Unit	
MMI	Man Machine Interface	
MS	Mobile Station	
Р		
PCB	Printed Circuit Board	
PCL	Power Control Level	
PCS	Personal Communication System	
PDU	Protocol Data Unit	
PLL	Phase Locked Loop	
PPP	Point-to-point protocol	
R	,	
RAM	Random Access Memory	
RF	Radio Frequency	
ROM	Read-only Memory	
RMS	Root Mean Square	
RTC	Real Time Clock	
S		-

SIM	Subscriber Identification Module	
SMS	Short Message Service	
SRAM	Static Random Access Memory	
Т		
TA	Terminal adapter	
TDMA	Time Division Multiple Access	
TE	Terminal Equipment also referred it	
	as DTE	
U		
UART	Universal asynchronous	
	receiver-transmitter	
UIM	User Identifier Management	
USB	Universal Serial Bus	
V		
VSWR	Voltage Standing Wave Ratio	
Z		
ZTE	ZTE Corporation	

# 2 AT Commands

# 2.1 Common Commands

# 2.1.1 A/: repeat

Description	Description This command is used to repeat the previous command.	
Syntax	A/	
	AT+CSQ	Inquire current signal strength
	A/	Repeat AT+CSQ command
Example	AT+CMGS="13714393404"	Send a text message
	>123→	
	A/	Repeat AT+CMGS command
	>123→	

### 2.1.2 ATA: answer

Description	This command is used to answer a call.	
Syntax	ATA	
Example	RING	An incoming call rings.
	ATA	Answer the incoming call.

# 2.1.3 ATD: dial

Description	This command is used to originate a voice call, data and fax call.	
Syntax ATD <string>;</string>		
	ATD> <mem><n>;</n></mem>	
	ATD> <n>;</n>	
	ATD>"name";	
Example	AT+CPBS="SM"	Select SIM card phonebook as the current
	ATD13024540756;	phonebook
		Search the number from SIM card
		phonebook and dial
	AT+CPBS="SM"	Select SIM card phonebook as the current
	ATD>2;	phonebook
	OK	Search the second phone number in
		current phonebook
	ATD>SM1;	Dial the first number in SIM card
		phonebook
	ATD13714393404;	Directly dial the phone number

	ATD>"name";	Search the phone number with "name" in
		SIM card and nvram
Parameters	<mem>: phonebook</mem>	
	"SM": SIM card phonebook.	
	"ME": local phonebook.	
	"LD": last dialled calls in phonebook.	
	"MC": missed calls	
	"RC": received calls	
	<n>: the n-th option in phonebook.</n>	
	<string>: the number of called party, e.g., *99#.</string>	

# 2.1.4 ATDL: dial last

Description	This command is used to dial the last outgoing number.	
Syntax	ATDL	
Example	ATD34394036;	Dial 34394036
	OK	
	ATH	Hang up the call
	OK	
	ATDL	Dial 34394036 again

### 2.1.5 ATE: enable

Description	This command is used to enable echo display.	
Syntax	ATE <n></n>	
Example	ATE0	ATE0, don't display input command on the
	OK	terminal
	OK	
	ATE1	ATE1, displays input command on the
	OK	terminal
	ATE1	
	OK	
Parameters	<n>=0 Disable echo display.</n>	
	<n>=1 Enable echo display.</n>	

# 2.1.6 ATH: hang up

Description	This command is used to hang up the call.	
Syntax	ATH	
Example	ATA	Answer the call
	ОК	

	ATH	Hang up the call

### 2.1.7 ATI: Information

Description	This command is used to display th	e module r	nanufa	acturer's inf	ormation.
Syntax	ATI				
Example	ATI	Display	the	module	manufacturer's
	ZTE Mobile LTD	information	on.		
	GSM/GPRS Mobile Station				
	Revision: 1.0				
	ОК				

# 2.1.8 ATQ: set whether or not to display the returned value.

Description	This command is used to set whether or not to display the returned value.	
Syntax	ATQ <n></n>	
Example	ATQ0	Set the terminal displays the returned value
	OK	
	ATQ0	
	OK	
	ATQ1	Set the terminal doesn't display the
	OK	returned value.
	ATQ1ATQ1	

### 2.1.9 +++: switch from data mode to command mode

Description	This command is used to switch from data mode to command mode.	
Syntax	+++	
Example	ATD*99#	Dial to enter data mode
	CONNECT	
	+++	Switch from data mode to command mode
	AT	
	OK	

# 2.1.10ATO: switch from command mode to data mode

Description	This command is used to switch from command mode to data mode.
Syntax	ATO

Example	ATD*99#	Dial to enter GPRS data connection
	CONNECT	Switch from data mode to command mode
	+++	
		Switch from command mode to data mode
	ATO	

# 2.1.11ATP: pulse

Description	This command is used for pulse dialling.	
Syntax	ATP	
Example	ATP	Set pulse dialling method
	OK	

# 2.1.12ATS0: auto answer setting

Description	This command is used to control the module's auto answer mode.	
Syntax	ATS0= <value></value>	
Example	ATS0=2	Auto answer after ringing twice
	OK	
	ATS0 ?	Check current settings
	2	
	OK	
	ATS0=0	Cancel auto answer
	OK	
Parameter	<value>: ringing times</value>	

# 2.1.13+CRC: set ringer type

Description	This command is used to display the type of ringer.	
Syntax	AT+CRC= <num></num>	
Example	AT+CRC=1	Set RING as ringer type
	OK	Set CRC as ringer type
	+CRING:VOICE	
Parameters	<num>:</num>	
	0: Do not display the type of ringer	
	1: display the type of ringer	
	Descriptions of ringer type:	
	VOICE: Voice	

GPRS: GPRS service
FAX: Fax

### 2.1.14+CLVL: volume level

Description	This command is used to set the volume level of the speaker.	
Syntax	AT+CLVL= <level></level>	
Example	AT+CLVL=100 Set current receiver volume as 100	
	OK	
Parameters	AT+CLVL? Check the current receiver volume	
	+CLVL:100	
	<level> ranging 0 ~ 100, the lower the level is, the smaller the volume is.</level>	

# 2.1.15+CLIP: Calling Line Identification Presentation

Description	This command is used to set CLIP.	The default settings are to disable CLIP.
Syntax	AT+CLIP= <mode></mode>	
	+CLIP: <mode> return from AT+CLIP?</mode>	
	+CLIP: <number>,<type>,<name>,&lt;</name></type></number>	subaddr>, <cli_validity></cli_validity>
	AT+CLIP?	
	+CLIP: <mode>,<status></status></mode>	
Example	AT+CLIP=1	Enable CLIP
	OK	
	RING:+CLIP: "130******,129,	There is an incoming call, incoming
	"name","",0	number is 130******
	AT+CLIP=0	Disable CLIP
	OK	
	RING	No CLIP
	At+CLIP?	Inquire CLIP
	+CLIP: 0,1	
	OK	
Parameters	<mode> :</mode>	
	0: disable CLIP	
	1: enable CLIP;	
	<number>: incoming number (need</number>	apply for relevant service)
	<type>: 129.</type>	
	<name>: contact's name</name>	
	<pre><subaddr>:syntax of sub address s</subaddr></pre>	pecified by satype. Default as null by MTK.
	<status>: CLIP status</status>	
	0: Do not provide CLIP service	
	1: Provide CLIP service	
	2: Unknown unavailable network	

### 2.1.16+ZSETMUTE: mute control

Description	This command is used for mute control and it can be used only during the call.	
Syntax	AT+ZSETMUTE= <mode></mode>	
Example	AT+ZSETMUTE=?	check the setting parameters
	+ZSETMUT: ( 0-1 )	
	ОК	
	AT+ZSETMUTE=1	Mute on
	OK	
	AT+ZSETMUTE=0	Mute off
	OK	
Parameters	<mode> :</mode>	
	0: Turn off mute	
	1: Turn on mute.	

### 2.1.17+CIMI: International Mobile Identification

Description	This command is used to read the International Mobile Identification of SIM	
	card and check current PIN.	
Syntax	AT+CIMI	
Example	AT+CIMI	Check CIMI
	460030916875923	Return CIMI
	OK	

# 2.1.18+CGMR: get product version

Description	This command is used to obtain the module's current product version.		
Syntax	AT+CGMR	AT+CGMR	
Example	AT+CGMR=? No meaning		
	OK		
	AT+CGMR	Return current module's version	
	+CGMR: Revision: 1.0		
	OK		

### 2.1.19+ECHO: echo remove

Description	This command is used to remove the echo.	
Syntax	AT+ECHO=num	
Example	AT+ECHO? +ECHO:1	Check current echo settings
	OK	
	AT+ECHO=0	Cancel echo remove
	OK	

Syntax	Num: default value 1.
	1: set echo remove function
	0: cancel echo remove function

# 2.1.20+(C)GSN: get current IMEI

Description	This command is used to get the current device's IMEI.	
Syntax	AT+GSN	
Example	AT+GSN	Return current IMEI
	N	
	OK	

# 2.1.21+ZVERS: get current software version

Description	This command is used to get the current software version.	
Syntax	AT+ZVERS	
Example	AT+ZVERS get the current software version.	
	+ZVERS: ***.bin	
	OK	

### 2.1.22+CLCK: lock

Description	This command is used to lock the terminal or network function.
Syntax	AT+CLCK= <fac>,<mode>[,<class>]]</class></mode></fac>
	+CLCK: <status></status>
Example	AT+CLCK=?
	+CLCK:("PF","SC","AO","OI","OX","AI","IR","AB","AG","AC","FD","PN","PU","PP","PC")
	OK

Parameters	<fac>:</fac>
	"SC" SIM card; "AO" all outgoing calls barring; "OI" Outgoing international calls barring;
	"OX" Outgoing international calls barring except for local; "Al" all incoming calls barring;
	"IR" Incoming roaming barring; "AB" all services barring; "AG" barring of all outgoing
	calls;
	"AC" barring of all incoming calls; "FD" Fixed dial; "PN" Personalized network; "PU"
	Personalized sub network; "PP" Personalized provider; "PC" Personalized corporate.
	<mode> :</mode>
	0 unlock
	1 lock
	2 check the status
	<pre><passwd>: password or operation code, character string type "***".</passwd></pre>
	<class>:</class>
	1 voice call
	2 data
	4 fax
	7 All
	<status> :</status>
	0: Disable
	1: Enable

# 2.1.23+CCFC: call forwarding number and conditions

Description	This command is used to set call forwarding number and conditions.	
Syntax	AT+CCFC= <reason>,<mode>[,<number></number></mode></reason>	
	[ , <type>[,<class>[,<subaddr>[,<saytype>[,time]]]]]</saytype></subaddr></class></type>	
	If mode!=2, setting successfully return: OK;	
	If mode=2, setting successfully return:	
	+CCFC: <status>,<class></class></status>	
Example	AT+CCFC=?	Check call forwarding control setting
	+CCFC: (0,1,2,3,4,5)	
	OK	Return reason range.

Parameters	<reason> :</reason>
	0:unconditional
	1: mobile device busy
	2: No answer
	3: Can't be connected
	4: All calls
	5: all conditions
	<mode>:</mode>
	0: disabled
	1: enabled
	2: check status
	3: register
	4: delete
	<number>: phone number</number>
	<type>:</type>
	145: international number
	129: other number
	<subaddr>: address of character string type</subaddr>
	<saytype>: 128</saytype>
	<pre><class>:</class></pre>
	1: voice
	2: data
	4: fax
	7: all
	Time: 12030 multiplies 5 seconds
	<pre><status> :</status></pre>
	0: deactivate
	1: activate
Remarks	Need apply for relevant services.

# 2.1.24+CCWA: call waiting

Description	This command is used for call waiting.	
Syntax	AT+CCWA=[ <n>] [,<mode> [,<class>]]</class></mode></n>	
Example	AT+CCWA=?	List all supported <n></n>
		+CCWA: (list of supported <n>s)</n>
		OK
	AT+CCWA?	Read current <n></n>
		+CCWA: <n></n>
		OK
	AT+CCWA=[ <n>]</n>	Call waiting setting
	[, <mode></mode>	As mode!=2, if successful:
	[, <class>]]</class>	OK
		As mode!=2, return:
		+CCWA: <status>,<class1>[<cr><lf></lf></cr></class1></status>
		+CCWA: <status>,<class2>[]] OK</class2></status>
		If there is an error in operation:
		+CME ERROR: <err></err>
		If <n>=1, send the result code of call</n>
		waiting:
		+CCWA: <number>,<type>,<class></class></type></number>
		[, <alpha>][,<cli validity="">]</cli></alpha>
		Under the premise of call waiting
		activated, during the call connection
		process;
		As the call terminates in the system, send
		the result code of call waiting.
Parameters	<n></n>	
	0 : do not send the result code of c	_
	1 : send the result code of call waiting. <mode></mode>	
	0 : Deactivate call waiting;	
	1 : Actiavte call waiting;	
	2 : Check current state;	
	<class> 1: voice call</class>	
	<pre><status> 0: deactivate ; 1: activate.</status></pre>	
	<pre><number> call waiting number, and</number></pre>	its syntax designated by <type>;</type>
	<type> <number> syntax</number></type>	
	<alpha>,<cli validity=""> see AT+CLIP</cli></alpha>	

# 2.1.25+CHLD: call hold

Description	This command is used to set call held and conference call.		
Syntax	AT+CHLD=[ <n>]</n>		
Example	AT+CHLD=?	Check supported <n></n>	
		+CHLD: (list of supported <n>s)</n>	
		OK	
	AT+CHLD=[ <n>]</n>	Set call held and conference call;	
		If the setting is successful:	
		OK	
		If there is an error in operation:	
		+CME ERROR: <err></err>	
Parameters	<n></n>		
	0: release all held calls or set a wai	ting call as UDUB	
	1: Release all activated calls and re	eceive a held or waiting call.	
	1X: Release call X 2: Hold all activated calls and receive another held or waiting call.		
	2X: hold all calls except for call X		
	3: Add the held call into the confere	nce call	
	<ul><li>4: Connect two calls or end two calls.</li><li>5: Activate call request from busy subscriber</li></ul>		
Remarks	This command is used for telecom service;		
	2. The range of X value:1~7		
	3. When there is both held call and waiting call, the process above should		
	be applied for the waiting call.  4. When releasing call, please firstly use AT+CHLD=1 to release the cucall, and use ATH to hang up the call.		
	<ol><li>Please refer to the method of when using AT+CHLD=3.</li></ol>	f conference call provided by the operator	

# 2.1.26\*TSIMINS: check SIM card status

Description	This command is used to check SIM card status.	
Syntax	AT*TSIMINS=num, status	
Example	AT*TSIMINS?	Check SIM card status.
	*TSIMINS:0,0	
	OK	No SIM card.

Parameters	Num: take 0 or 1, no meaning.
	Status:
	0 : There is no SIM card;
	1 : There is SIM card.

# 2.1.27+CPWD: change password

Description	This command is used to change the password.	
Syntax	AT+CPWD= <fac>,<passwd>,<newpasswd></newpasswd></passwd></fac>	
	+CPWD: <fac,length>s</fac,length>	
Example	AT+CPWD=?	Check the setting range.
	+CPWD:	Return the list of parameters;
	("SC",8),("P2",8),("AO",4),("OI",4),("OX",4),	
	("AI",4),("IR",4),("AB",4),("AG",4),("AC",4)	
	OK	
	AT+CPWD ="SC","1234","2345"	
	OK	Change password of SIM card
Parameters	Fac: "SC" SIM card; "AO" all outgoing calls barring; "OI" Outgoing international	
	calls barring; "OX" Outgoing international calls barring except for local; "AI" all	
	incoming calls barring; "IR" Incoming roaming barring; "AB" all services barring;	
	"AG" barring of all outgoing calls; "AC" barring of all incoming calls; "FD" Fixed	
	dial;	
	Passwd: password or operation code, character string type "***".	
	newpasswd: new password or operation code, character string type "***".	
	Length: password length supported by fac.	

# 2.1.28+CGMI: inquire manufacturer's information

Description	This command is used to inquire manufacturer's information.	
Syntax	AT + CGMI	
Example	AT+CGMI	Inquire manufacturer's information
	+CGMI: ZTE Mobile LTD	
	ОК	

# 2.1.29ATZ: reset

Description	This command is used to read the parameter in NVRAM and set it as the	
	current parameter.	
Syntax	ATZ <n></n>	
Example	ATZ0	Reset the parameter correctly.
	OK	

### 2.1.30 +CSCS: character set selection

Description	This command is used to select the type of languages;	
Syntax	AT+CSCS= <string></string>	
Example	AT+CSCS=?	
	+CSCS: "IRA", "GSM", "HEX",	
	"PCCP437", "8859-1", "UCS2",	
	"UCS2_0X81"	
	OK _	
	AT+CSCS="IRA"	
	OK	
	AT+CSCS?	
	+CSCS: "IRA"	
	OK	
Parameters	String: a type of string, selecting IRA, GSM, etc.	
	"IRA" International Reference Alphabet (refer to ITU-T T.50[13]), excluding	
	some special alphabets.	
	"GSM" GSM default symbols ( refer to section 6.2.1 in GSM 03.38 ) .  "UCS2" 16bit ( ISO/IEC10646[32] ) ; UCS2 string converts to hexadecia	
	number ranging from 0000 to FFFF;	

### 2.1.31+CLCC: check call status

Description	This command is used to check the status of current calls or each call;	
Syntax	AT+CLCC	
	+CLCC: <id1>,<dir>,<stat>,<mode>,<mpty>,[,<number>,<type></type></number></mpty></mode></stat></dir></id1>	
	[, <alpha>[,<priority>]]]</priority></alpha>	
	+CLCC: <id2>,<dir>,<stat>,<mode>,<mpty>,[,<number>,<type></type></number></mpty></mode></stat></dir></id2>	
	[, <alpha>[,<priority>]]]</priority></alpha>	
	OK	
Example	AT+CLCC	
	OK	
	ATD10086;	
	OK	
	AT+CLCC	
	+CLCC: 1,0,2,0,0,"10086",129	
	OK	

Parameters	<idx>: caller ID</idx>		
	<dir>: call direction, taking the following value:</dir>		
	0: MO		
	1: MT		
	<stat> call status, taking the following value:</stat>		
	0: activated		
	1: call held status		
	2: call originated, dialing		
	3: call originated, ringing		
	4: Incoming call ring status		
	5: call waiting		
	<mode>: call type, taking the following value:</mode>		
	0: voice call		
	1: data call		
	2: fax		
	<mpty>:multi-party call, taking the following value:</mpty>		
	0: Non multi-party call		
	1: Multi-party call		
	<number>: call number, ASCII code</number>		
	<type>: call number type;</type>		
	<alpha>: the text information corresponding to the call number in the</alpha>		
	phonebook (don't support temporarily, reserve the string)		
	<pre><pri><pri><pri>onity&gt;: do not support string temporarily</pri></pri></pri></pre>		

# 2.2 DTMF Command

# 2.2.1 +VTS: send DTMF

Description	This command is used to send DTMF.	
Syntax	AT+VTS= <string></string>	
Example	AT+VTS=? Check +VTS parameter	
	+VTS:(0-9,*#,A,B,C,D),,(1-255)	
	OK	
	ATD******;	Dial
	AT+VTS="3,6,9"	Send 369 DTMF
	AT+VTS=3	
	AT+VTS=6	
	AT+VTS=9	
Parameters	String is a combination of characters, separated by comma. The character	
	ranges from 0 to 9,*, #, A-D.	

# 2.3 Network Service Command

# 2.3.1 +CREG: network registration and roaming

Description	This command is used to check the	This command is used to check the module's network registration and roaming	
	status.		
	Note: Need AT&W to save the result when setting 0 or 1.		
Syntax	AT+CREG= <mode></mode>		
	+CREG : <mode>,<stat> return co</stat></mode>	ode	
Example	AT+CREG=0	Disabled network registration and provide	
	OK	result code	
	AT+CREG?	Display the module's registration status	
	+CREG: 0,1		
	AT+CREG=?	Check status range	
	+CREG: (0-2)		
	ОК		
Parameter	<mode> :</mode>		
	Disabled network registration and provide result code (default)     Enabled network registration and provide result code: +CREG: <stat></stat>		
2 Enabled network registration and provide the location information		provide the location information.	
	<stat> :</stat>		
	0: Not logged on the network yet, currently not searching for new operator		
	1: Already logged on the local network.		
	2: Not logged on the network, currently searching for the BS		
	4: unknown code		
	5: Already logged on the network, under roaming status		

# 2.3.2 +COPS: network selection

Description	This command is used for network selection.	
Syntax	AT+COPS=[ <mode>[,<syntax>[,<oper>]]]</oper></syntax></mode>	
Example	AT+COPS? Return current network's	
	+COPS= <mode>[,<syntax>,<oper>] registration mode and network</oper></syntax></mode>	
	OK	
	AT+COPS=[ <mode>[,<syntax>[,<oper>]]] Select and register network</oper></syntax></mode>	
	OK	

Parameter	<mode></mode>	
	0 auto select, omit <syntax> <oper></oper></syntax>	
	1 manual select, need <syntax><oper></oper></syntax>	
	3 not involve network registration, this command is used to set syntax only; at	
	this point, need <syntax></syntax>	
	4 manual/auto; If manual registration fails, auto register	
	<syntax></syntax>	
	0 syntax of long character <oper></oper>	
	1 ormat of short character < oper>	
	2 number syntax <oper></oper>	
	<syntax>:</syntax>	
	0 long syntax alpha <oper>,up to 16 character</oper>	
	1 short <oper>, up to 8 character</oper>	
	2 numeric <oper> (MCC+MNC), default</oper>	
	<stat></stat>	
	0 unknown	
	2 current registered network	
	3 forbidden registered network	

# 2.4 Mobile Device Control and Status Report

### 2.4.1 +CPAS: check module's status

Description	This command is used to check the module's work status.	
Syntax	AT+CPAS	
Example	AT+CPAS	Check the module's current work status.
	+CPAS: 2	
	OK	
Parameter	<pas></pas>	
	0: Ready to receive AT command	
	2: Unknown status (default)	
	3: Incoming call (ring)	
	4: In a call	
	<pre><pas> :</pas></pre>	
	<pre><pas> :</pas></pre>	
	0: ready to receive AT command;	
	1: Not ready to receive AT command;	
	2: Unrecognized status;	
	3: Incoming call (Ring);	
	4: can receive AT command, but in a call;	
	5: In low power consumption mode,	can't normally receive AT command.

### 2.4.2 +CFUN: set module's function

Description	This command is used to enable/disable some functions of the module.	
Syntax	AT+CFUN= <func>,<rst></rst></func>	
Example	AT+CFUN=?	Check the setting range
	+CFUN(1,4),(0-1)	
	OK	
	AT+CFUN=1,0	Settings validate, invalid after reset
	AT+CFUN=1,1	Settings valid after reset
Parameter	<fun></fun>	
	1 Full function (default)	
	4 Disable RF Tx. and Rx. Function	
	<rst></rst>	
	0 valid after settings	
	1 valid after restart	

# 2.4.3 +CMEE: mobile equipment errors

Description	This command is used for mobile equipment's error report.	
Syntax	AT+CMEE= <n></n>	

Example	AT+CMEE?	+CMEE: <n></n>
		OK
		Check current error report method
	AT+CMEE= <n></n>	OK
		Select error report method
Parameter	<n></n>	
	0 Only ERROR	
	1 Provide error's specific number	
	2 Provide error's specific number and detailed prompt	

# 2.4.4 +ZPWROFF: power off

Description	This command is used to power off the module.	
Syntax	AT+ZPWROFF	
Example	AT+ZPWROFF Power off the module	
	OK	

# 2.4.5 +CPIN: input PIN

Description	This command is used to check PIN status and input PIN. The functions can be	
	used only after the correct PIN is entered.	
Syntax	AT+CPIN=	
Example	AT+CPIN?	check PIN status
	+CPIN:READY	No need to input new PIN
	OK	
	AT+CPIN?	check PIN status
	+CPIN:SIM PIN	Need input PIN
	AT+CPIN="***"	Enter correct PIN
	OK	
Parameter	AT+CPIN?: check if what passwords need to be entered.	
	+CPIN: READY: don't need to enter any password.	
	+CPIN: SIM PIN: need enter PIN.	
	+CPIN: SIM PUK: PIN unlock password +CPIN: PH-SIM PIN: SIM card bundle password +CPIN: SIM PIN2: PIN2 password	
	+CPIN: SIM PUK2: PIN2 unlock pas	ssword
	+CPIN: PH-NET PIN: network password	
	Pin: string value.	

# 2.4.6 +CSQ: check signal strength

Description	This command is used to check received signal strength indicator(rssi) and	
	error rate (ber)	

Syntax	AT+CSQ
Example	AT+CSQ
	+CSQ: <rssi>,<ber></ber></rssi>
parameters	<rssi> :</rssi>
	0–113dbm
	1-111dbm
	230–10953dbm
	31-51dbm
	99 : network unavailable
	<pre><ber> :</ber></pre>
	0 ~ 7 : normal
	99 : network unavailable

# 2.4.7 +CCLK: clock management

Description	This command is used to set and check the date/time of real-time clock.	
Syntax	AT+CCLK= <time></time>	
Example	AT+CCLK? Check current time and date	
	+CCLK: "04/02/09,17:34:23" Current network time and date	
parameters	AT+CCLK="04/02/09,18:34:23" Set current date and time	
	Time string syntax: "yy/mm/dd,hh: mm: ss "	

# 2.5 Message Service Command

### 2.5.1 +CSCA: SMS center number

Description	This command is used to set SMS center number.	
Syntax	AT+CSCA= <sca>[,<tosca>]</tosca></sca>	
Example	AT+CSCA="+861380****500"	Set SMS center number
	OK	Check SMS center number
	AT+CSCA?	
	+CSCA: "8613800755500", 145	
	OK	
Parameters	<sca> : SMS center address</sca>	
	<tosca>: SMS center syntax</tosca>	

# 2.5.2 +CNMA: message acknowledgement

Description	This command is used for message acknowledgement.	
Syntax	AT+CNMA	
Example	at+cnmi=2,2,0,0,0	Set message indication syntax
	OK	
	at+csms=1	Set message service syntax
	+CSMS: 1,1,1	
	OK	
	+CMT:,60	
	AT+CNMA	Message acknowledgement
	OK	
Parameters	Valid when setting+CNMI=2,2,0,0,0 and +CSMS=1,1,1,1	

### 2.5.3 +CMGF: SMS mode

Description	This command is used to set SMS input method.	
Syntax	AT+CMGF= <num></num>	
Example	AT+CMGF=1	Set the text mode
	OK	
	AT+CMGF?	Check current input method
	+CMGF: 1	Current settings as text mode
	AT+CMGF=?	Check current setting range
	+CMGF=(0-1)	
	OK	
Parameters	0 : PDU mode	
	1 : Text mode	

# 2.5.4 +CNMI: message indication

Description	This command is used to set new message indication.	
Syntax	AT+CNMI= <mode>,<mt>,<bm>,<ds>,<bfr></bfr></ds></bm></mt></mode>	
Example	AT+CNMI=?	Check current setting range
	+CNMI:	
	(0-3),(0-3),(0,2,3),(0,1),(0,1)	
	OK	
	AT+CNMI=3,1,0,0,0	Set message receiving mode as +CMTI:
	OK	men, index
	+CMTI: "SM",19	Receive new messages
	AT+CNMI=3,2,0,0,0	Set message receiving mode
	OK	
	AT+CMGF=1	Set as TEXT mode
	OK	
	+CMT:	Received a message TEXT from
	"+86130******","","07/02/14,	130*****
	10:29:04+32"	
	text	
Returned	+CMTI: <mem>,<index> : receive new message</index></mem>	
results	+CMT:, <length><cr><lf><pdu>: directly output message (PDU mode) +CBM:<length><cr><lf><pdu>: directly output cell broadcast message (PDU mode)</pdu></lf></cr></length></pdu></lf></cr></length>	

#### **Parameters**

<mode>: control the processing of message alert code.

0: message alert code cached in TA; if TA is full, the alert code may be saved in other place or the oldest code might be abandoned and replaced by the latest code.

- 1: when the connection of TA-TE is held, abandon the saved message alert code and reject the new alert code; in other cases, directly display the alert code on the terminal;
- 2: when the connection of TA-TE is held, the message alert code is cached in TA, as the connection is released, directly display the alert code on the terminal;; in other cases, directly display the alert code on the terminal;
- 3: directly display the alert code on the terminal;

<mt>: set the syntax of new message alert code.

- 0: save received messages to default memory (including class 3), do not notify TE.
- 1: The syntax of new message alert code is +CMTI: "MT",<index>, message contents saved but not directly displayed;
- 2: The syntax of New message alert code is:

(Text mode)

+CMT :<oa>,[<alpha>],<scts>[,<tooa>,<fo>,<pid>,<dcs>

<sca>,<tosca>,<length><CR><LF><data>, message contents directly
displayed but not saved;

(PDU mode)

- +CMT:[<alpha>],<length><CR><LF><pdu>
- 3: For class 3 messages, directly send to TE just as < mt > = 2. For other class, the same goes to < mt > = 1.

**<br/>bm>:** Indication method upon the receipt of broadcast message.

- 0: No CBM alert sent to TE.
- 2: Send new CBM directly to TE.

(text mode)

+CBM:<sn>,<mid>,<dcs>,<page>,<pages>

<CR><LF><data>(text mode), cell broadcast contents directly displayed but not saved;

(PDU mode)

- +CBM:<length><CR><LF><pdu>
- 3: Class 3 CBM uses the result code (defined in <mt>=2) and directly sends to TE.

<ds>: message status report

0: no message status report sent to TE.

1: send message status report to TE:

+CDS: <length><CR><LF><pdu> (PDU mode)

+CDS: <fo>,<mr>,[<ra>],[<tora>],<scts>,<dt>,<st> (TEXT mode)

#### <bfr>:

0: as <mode> is set as 1..3, the code saved in TA will be sent to TE (return OK prior to transmitting the code).

1: as <mode> is set as 1..3, the code saved in TA will be erased.

# 2.5.5 +CMGR: message read

Description	This command is used to read the received message.		
Syntax	AT+CMGR=?	AT+CMGR=?	
Example	AT+CMGF=1	+CMTI:	
	AT+CMGR=1	"MT": 1	
	+CMGR:"REC UNREAD","133*******,,	Receive the message, saved at index 1	
	"04/02/25,12 :58 :04 + 04"	Set TEXT syntax	
	ABCD	·	
	ОК	Read the first TEXT message	
		· ·	
	AT+CMGF=0	Set PDU mode	
	AT+CMGR=1		
	+CMGR: 1,,127	Read first PDU message	
	0891683108705505F00408A1705581	_	
	060008701091905564236E5C0A656C		
	76845BA26237FF0C60A85DF27ECF62		
	10529F5F00901A4E86003100300030		
	51430047005000520053595799104F		
	1860E04E1A52A1FF0C4ECE00320030		
	003000375E74003000326708003000		
	3165E55F0059CB751F654830028C22		
	8C22FF016DF1573379FB52A8		
	516C53F8		
Returned	AT+CMGR= <index></index>		
results	Return syntax:		
	The terminal adaptor would return the me	ssage of index saved in mem1	
	-if select text mode (+CMGF=1):		
	+CMGR : <stat>,<oa>,[<alpha>],<scts></scts></alpha></oa></stat>	[, <tooa>,<fo>,<pid>,<dcs>,</dcs></pid></fo></tooa>	
	<pre><sca>,<tosca>,<length>]   <cr><lf> <data> (used to read received message)   +CMGR :<stat>,<da>,[<alpha>][,<toda>,<fo>,<pid>,<dcs>,[<vp>],<sca>,   <tosca>,<length>]   <cr><lf> <data> (used to read transmitted message)  if select PDU mode (+CMGF=0) :   +CMGR: <stat>,[<alpha>],<lenth>,<cr>,<lf>,<pdu>   OK   -if error occurs, prompt:</pdu></lf></cr></lenth></alpha></stat></data></lf></cr></length></tosca></sca></vp></dcs></pid></fo></toda></alpha></da></stat></data></lf></cr></length></tosca></sca></pre>		
	+CMS ERROR: <err></err>		
	Note: after reading message, the status will change from "REC UNREAD" to		
	READ".		

Parameter	<alpha> : the name of corresponding <da> or <oa> on the terminal.</oa></da></alpha>
	<stat> : the message status in memory.</stat>
	<oa> : message original number string</oa>
	<da> : message target string</da>
	<scts> : message service center time string</scts>
	<lenth> : length of message body <data></data></lenth>
	<pdu> : ME/TA hex value</pdu>
	<stat>:</stat>
	0:"REC UNREAD" received unread message.
	1:"REC READ" received read message.
	2:"STO UNSENT" saved unread message.
	3:"STO SENT" saved read message
	4: "All" all messages

# 2.5.6 +CMGW: message write

Description	This command is used to save the messages into	<mem2>.</mem2>
Syntax	TEXT mode: (AT+CMGF=1)	
	AT+CMGW= <phone number=""></phone>	
	>string <ctrl-z></ctrl-z>	
	PDU mode:(AT+CMGF=0)	
	AT+CMGW= <string len=""></string>	
	>pdu string <ctrl-z></ctrl-z>	
Example	AT+CMGF=1	
	ОК	
	AT+CMGW="13714393404"	Write messages under Text
	> AT+CMGW="13714393404" <ctrl-z></ctrl-z>	mode
	+CMGW: 41	
	ОК	
	AT+CMGF=0	
	ОК	
	AT+CMGW=17	Write messages under PDU
	>0891683108705505f011000b813120	mode
	882624f700f1ff0361f118 <ctrl-z></ctrl-z>	
	+CMGW: 42	
	OK	
Parameters	phone number:	
	string len: length of PDU string	

## 2.5.7 +CSMS: select SMS service

Description	The command is used to select SMS <service>. Send ( SMS-MO ) , receive</service>
	( SMS-MT ) , cell broadcast SMS-CB.
Syntax	AT+CSMS = <service></service>

36

Example	AT+CSMS?	Check the current SMS service
	+CSMS:0,1,1,1	Support receive/transmit message and
	ОК	cell broadcast
	AT+CSMS=0	Set current SMS service as GSM Phase 2
	+CSMS: 1,1,1	Support receive/transmit message and
	OK	cell broadcast
	AT+CSMS?	Check the settings
	+CSMS:0,1,1,1	Succeed
	OK	
Parameter	<service></service>	
	0 : compatible with GSM07.05 F	hase 2 version 4.7.0
	1 : compatible with GSM07.05 F	hase 2+ version
	<mo></mo>	
	1 : support send message	
	<mt></mt>	
	1 : support receive message	
	1 : support cell broadcast	

# 2.5.8 +CMGS: message send

Description	This command is used to send the n	nessage from the terminal to the network.		
	Return the parameter to the terminal after the message is sent.			
	Note: there is error prompt as the me	essage is sent to illegal number.		
Syntax	Text mode (AT+CMGF=1)	Text mode (AT+CMGF=1)		
	AT+CMGS= <de><cr></cr></de>	AT+CMGS= <de><cr></cr></de>		
	<data><ctrl-z esc=""></ctrl-z></data>	<data><ctrl-z esc=""></ctrl-z></data>		
	PDU mode(AT+CMGF=0)			
	AT+CMGS= <length><cr></cr></length>			
	<pdu><ctrl-z esc=""></ctrl-z></pdu>			
Example	AT+CMGF=1	Set as text mode		
	OK			
	AT+CMGS="13316538879" <cr></cr>	Send a "ABC" message to 13316538879		
	ABC <ctrl z=""></ctrl>			
	OK			
	AT+CMGF=0	Set as PDU mode		
	OK			
	AT+CMGS=17 <cr></cr>	Send a "ABC" message to 13028862427		
	0891683108705505f011000b81312			
	0882624f700f1ff0361f118 <ctrl-z></ctrl-z>			
	+CMGS:2			
	OK			

Parameter	<de> : message sending number under text mode</de>
	<length> : length of bytes in TPDU under PDU mode</length>
	<data>: message under text mode</data>

# 2.5.9 +CPMS: preferred message storage

Description	This command is used for preferred message storage.	
Syntax	AT+CPMS= <mem1>[,<mem2>[<mem3>]]</mem3></mem2></mem1>	
	+CPMS= <used1>,<total></total></used1>	
Example	AT+CPMS="SM","SM","SM"	Check message storage in SIM card
	+ CPMS:4,50,4,50,4,50	mem1 total capacity 50 entries, 4 used
	ОК	mem2 total capacity 50 entries, 4 used
		mem3 total capacity 50 entries, 4 used
	at+cpms=?	
	+CPMS: ("SM", "ME", "SM_P",	
	"ME_P", "MT"), ("SM", "ME",	
	"SM_P", "ME_P", "MT"), ("SM",	
	"ME", "SM_P", "ME_P", "MT")	
	OK	
	at+cpms?	
	+CPMS: "SM", 4, 50, "SM", 4, 50,	
	"SM", 4, 50	
	OK	
	at+cpms="me","me","me"	
	+CPMS: 0, 450, 0, 450, 0, 450	
	ОК	
	at+cpms?	
	+CPMS: "ME", 0, 450, "ME", 0, 450, "ME", 0, 450	
	ОК	

38

Parameters	<mem1> : used to read, delete message in SIM card</mem1>
	<mem2> : used to write and send message in SIM card</mem2>
	<mem3> : used for messages not saved to PC in SIM card</mem3>
	<used> : used entries</used>
	<total> : total number of memory</total>
	SM: SIM card
	ME: NVRAM

# 2.5.10+CMGD: message delete

Description	This command is used to delete a message from selected memory.	
Syntax	AT+CMGD= <index></index>	
Example	AT+CMGF=1	Set as text mode
	AT+CMGL="all"	List all messages
	+CMGL:1,"REC	
	READ","130******","",	
	abcdefg	
	+CMGL:2,"REC	
	READ","131******","",	
	abcdef	
	+CMGL:3,"STO	
	SENT","1331******",""	
	opqrxt	
	ОК	
	AT+CMGD=2	Delete the second message
	OK	

39

	AT+CMGF=0	Set as PDU mode
	AT+CMGL=4	List all messages
	+CMGL: 1,3,,21	
	0891683108705505F0010F0B813	
	120882624F700	
	0808738B54084F1F5927	
	+CMGL: 2,3,,21	
	0891683108705505F001100B813	
	120882624F700	
	0808738B54084F1F5927	
	+CMGL: 3,3,,21	
	0891683108705505F001110B8131	
	20882624F700	
	0808738B54084F1F5927	
	OK	
	AT+CMGD=1	Delete the first message
	OK	
	at+cmgd=1,1	Delete all read messages
	OK	
	at+cmgd=1,2	Delete all read and sent messages
	OK	
	at+cmgd=1,3	Delete all read, sent and unsent
	OK	messages
	at+cmgd=1,4	
	OK	Delete all messages
Parameters	<pre><start_index>: index of saved messa</start_index></pre>	ages
	<mode>: delete marks</mode>	
	0: delete the message at the designation	ated index
	1: delete all read messages	
	2: Delete all read and sent message	
	3: Delete all read, sent and unsent messages	
	4: Delete all messages: delete the m	nessage at the designated index

# 2.5.11+CMGL: message list

Description	The command is used to read a kind of messages saved in the selected memory via	
	+CPMS command.	
Syntax	AT+CMGL= <stat></stat>	Ī

Example	AT+CMGF=1	Set as text mode
	OK AT+CMGL="ALL"	Lies tout made
	AT+CMGL= ALL	Use text mode Check all messages
	+CMGL:1,"REC READ","130*******","",	Check all messages
	abcdefg	
	_	
	+CMGL:2,"REC READ","131*******","",	
	abcdef	
	LCMOL 2 PCTO	
	+CMGL:3,"STO SENT","1331*******","",	
	opqrxt	
	OK	
Returned	1) text mode as below:	
syntax	+CMGL : <index>,<stat>,<da oa="">,[<alpha< td=""><td>&gt;],[<scts>][,<tooa toda="">,<length>]</length></tooa></scts></td></alpha<></da></stat></index>	>],[ <scts>][,<tooa toda="">,<length>]</length></tooa></scts>
	<cr><lf><data><cr><lf></lf></cr></data></lf></cr>	
	+CMGL : <index>,<stat>,<da oa="">,[<alpha< td=""><td></td></alpha<></da></stat></index>	
	<cr><lf><data> [] (Received/transmi</data></lf></cr>	itted message list)
	OK	
	2)PDU mode as below: +CMGL: <index>,<stat>,[<alpha>],<length< td=""><td>n&gt;<cr><i f=""><ndu></ndu></i></cr></td></length<></alpha></stat></index>	n> <cr><i f=""><ndu></ndu></i></cr>
Parameters	1. text mode(+CMGF=1)	P OTC ELL Pad
	<stat></stat>	
	REC UNREAD: receive unread message	
	REC READ: receive read message	
	STO UNSENT: store unsent message	
	STO SENT: store sent message	
	ALL: all messages	
	2.PDU Mode (+CMGF=0)	
	<stat></stat>	
	<stat> :</stat>	
	0: received unread message	
	1: received read message	
	2: saved unsent message	
	3: saved unsent message	
	4: All messages	
	<index> : message index</index>	
	<pre><!--mdcx : message index </pre--><length> : TPDU length in PDU mode</length></pre>	
	<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>	
	<pre><data> : message text in text mode</data></pre>	

41

# 2.5.12+CMSS: messages saved in SIM card

Description	This command is used to send the messages saved in SIM card.	
Syntax	AT+CMSS= <index>[,<da> [,<toda>]]</toda></da></index>	
	Return syntax: +CMSS : <mr> 或+CMS ERROR: <err></err></mr>	
	If the new target number is designate	ted, the new number will replace the number
	saved in the message.	
Example	AT+CMGF=1	Set as text mode
	AT+CMGW="1331653****" <cr></cr>	
	ABC <ctrl-z></ctrl-z>	Write a message and send it to
	+CMGW:2	1331653****
	OK	The message will be saved in index 2
	AT+CMSS=2	Send the messages saved in index 2
	+CMSS:0	Message sent
	OK	CMSS return initial value 0
	AT+CMSS=2	As the message is saved
	+CMSS:1	Do not designate the number to send the
	OK	message
		Message sent , (send to the address used
		to save the message
		CMSS return value 1
	AT+CMSS=2,"1302755****"	Use number 1302755**** to replace the
	+CMSS:2	original number 1331653****, and send a
	ОК	message to new number

# 2.5.13+ZSMGS: message full indication

Description	This command is used to indicate the message full status.	
Syntax	+ZSMGS: <status></status>	
Example	+ZSMGS:FULL	+ZSMGS:FULL
	OK	OK
Parameters	<status> : messages status full</status>	

# 2.6 Phonebook Command

# 2.6.1 +CPBS: phonebook storage

Description	This command is used to select phonebook memory.	
Syntax	AT+CPBS= <type></type>	
Example	AT+CPBS?	Check current phonebook settings
	+CPBS: "SM",1,250	Select SIM card as current phonebook
	OK	
	AT+CPBR=1	Check phonebook storage memory
	+CPBR=1,"130******",129,""	
	OK	
	AT+CPBS=?	Select the phonebook saved in SIM card
	+CPBS: ("ME", "SM", "LD", "MC",	
	"RC","FD","DC","ON")	
	OK	
Parameters	Type:	
	"SM" SIM card	
	"FD" Fixed dial	
	"LD" Last dial	
	"MC" Missed calls	
	"ME" Module memory	
	"DC" Dialed calls	
	"RC" Received calls	
	"ON": number list in SIM card (or MI	≣)

## 2.6.2 +CPBR: phonebook read

Description	This command is used to read the phonebook information.	
Syntax	AT+CPBR= <index1>,[<index2>]</index2></index1>	
	+CPBR: <index>,<number>,<text></text></number></index>	
Example	AT+CPBR=? Check current phonebook information	
	+CPBR: (1-10),40,13	
	OK	
	AT+CPBR=1	Read the first number of currently
	+CPBR=1,"130******,129,""	selected phonebook
	OK	

	AT+CPBS="SM"	Select SIM card phonebook
	OK	Check SIM card phonebook information
	AT+CPBR=?	Read the contacts information from 1 to 3
	+CPBR: (1-10),40,13	
	AT+CPBR=1,3	
	+CPBR: 1,"8151****",129,""	
	+CPBR: 2,"8636****",129,""	
	+CPBR: 3,"8604***",129,""	
Parameters	index1: read phonebook index	
	index2: read the contacts information from index1 to index2	
	index: index	
	number: phone number	
	type: phone type	
	129: domestic	
	145: international	
	text: number's corresponding name	

# 2.6.3 +CPBW: phonebook write

Description	This command is used to write information into the phonebook.	
Syntax	AT+CPBW= <index>,<number>,<type>,<name></name></type></number></index>	
-	+CPBW:( <index>),<length>,(<type:< td=""><td>&gt;),<tlength></tlength></td></type:<></length></index>	>), <tlength></tlength>
Example	AT+CPBW=?	AT+CPBW=?
	+CPBW: (1-250),40,(129,145),14	+CPBW: (1-250),40,(129,145),14
	ОК	ОК
	AT+CPBS="SM"	Select SIM card memory
	OK	
	AT+CPBW=1,"130******,129,	Write the number and number at Index 1
	"john"	in the phonebook
	OK	
	AT+CPBR=1	
	+CPBR:1,"130******,129,	Read the first name and number in
	"john"	phonebook
	OK	
	AT+CPBW=1	Delete the first entry in phonebook
	OK	

Parameters	Index: index	
	length: number length	
	type: phone type	
	129: domestic	
	145: international	
	tlength: length of contact's name	
	Number: phone number	
	Name: name corresponding to the number	
Remarks	For Chinese name, the limit length of Chinese name is not 14 because the	
	Chinese string is ended with "\0\0".	

# 2.6.4 +CPBF: phonebook find

Description	This command is used to find the information in phonebook.		
Syntax	AT+CPBF= <name></name>		
	+CPBF: <index>,<number>,<type>,<name></name></type></number></index>		
	+CPBF: <nlength>,<tlength></tlength></nlength>		
Example	AT+CPBF=?	Check current phonebook information	
	+CPBF:40,14	Phone number length 40	
		Name length 14	
	OK		
	AT+CPBS="SM"	Select phonebook	
	OK		
	AT+CPBW=1,"130******,129,	Write phone information in the first field of	
	"john"	current phonebook	
	OK	Read relevant information	
	AT+CPBR=1		
	+CPBR:1,"130******,129,	Search the contacts with the name John	
	"john"		
	OK		
	AT+CPBF="john"		
	+CPBF: 1,"130******,129,"john"		
	OK		
Parameter	index: index		
	nlength: number length		
	type: phone type		
	129: domestic		
	145: international		
	tlength: length of contact's name		
	Number: phone number		
	Name: name corresponding to the number		
Remarks	Only find in "SM","ME", can't find in	Only find in "SM","ME", can't find in "LD", "MC", "RC","FD","DC","ON".	

## 2.6.5 +CNUM: owner's number

Description	This command is used to read the owner's number.	
Syntax	AT+CNUM	
Example	AT+CNUM +CNUM: "","130******,129,7,4 OK	Read the owner's number
Parameter	The owner's number can be written into SIM card through AT+CPBS="ON" ;AT+CPBW command and read through AT+CNUM command.	

# 2.7 Data Compression Command

#### 2.7.1 +IFC: flow control

Description	This command is used to set the flow control between TE-TA.	
Syntax	AT+IFC=[ <mode1>[,<mode2>]]</mode2></mode1>	
Example	AT+IFC=2,2	Set mode1 of TE-TA flow control as RTS,
	OK	mode2 as CTS
Parameter	mode1:	
	0: no flow control.	
	1:XON/XOFF, don't transmit data;	
	2:RTS;	
	3: XON/XOFF, transmit data.	
	mode2:	
	0: no flow control.	
	1: XON/XOFF;	
	2: CTS;	

#### 2.7.2 &D: set DTR mode

Description	This command is used to set DTR mode;		
Syntax	AT&D[ <value>]</value>	AT&D[ <value>]</value>	
Example	AT&D0	AT&D0 Omit DTR signal	
	ОК		
Parameter	value:		
	0 : Omit DTR signal;		
	1: DTR from OFF to ON;		
	2: DTR from ON to OFF;		

#### 2.7.3 &C: set DCD mode

Description	This command is used to set DCD mode;	
Syntax	AT&C[ <value>]</value>	
Example	AT&C0 DCD signal is always valid	
	OK	
Parameter	value:	
	0: DCD signal is always valid;	
	1: DCD signal is valid if there is data;	

#### 2.7.4 +IPR: set module's baud rate

Description	This command is used to set the module's baud rate and automatically save the	
	current baud rate.	
Syntax	AT+IPR= <baud rate=""></baud>	

	AT+IPR?	Check current module's baud rate
	+IPR: 115200	
Example	ОК	
	AT+IPR=?	Check supported baud rate
	AT+IPR=115200	Set the baud rate as 115200
	ОК	
Remarks	The default is the saved setting of baud rate.	

# 2.7.5 &F: restore factory settings

Description	This command is used to restore factory settings.	
Syntax	AT&F	
Example	AT&F Restore factory settings	
Remarks	AT&F command's parameters include ATS, ATQ & ATE. AT&F basic parameters	
	can't be validated from the echo of AT commands.	
	Reference validation method: after turning on the module, firstly input AT&V,	
	obtain basic parameters; use the set parameters such as ATS, CREG; after	
	setting, use AT&F to obtain the basic parameters. Compare these parameters	
	and check if they are identical.	

## 2.7.6 &W: save settings

Description	This command is used to save the current parameter settings.	
Syntax	AT&W	
Example	AT&W Save the current parameter settings.	
Remarks	AT&W command's parameters used to save include ATE, ATQ and ATS. The	
	user parameters saved by AT&W can't be validated from the echo of AT	
	commands.	
	Reference validation method: firstly use the set parameters such as ATE, ATQ &	
	ATS, use AT&V to read the user information, and then input ZT&W after	
	restarting the module, use ATZ1 to read NV and use AT&V to read the user	
	information. Compare to the parameters before restarting and check if they are	
	identical.	

## 2.8 GPRS Command

## 2.8.1 +CGDCONT: set PDP

Description	This command is used to set GPRS PDP syntax;	
Syntax	AT + CGDCONT=cid, type, APN[,PDP_ADDR]	
Example	At + CGDCONT=1, "IP","CMNET"	
	ATD*99#	
	Connect	
Parameters	cid: used to mark the number of PDP, minimum 1;	
	type: a type of PDP package;	
	IP: use TCP/IP package;	
	APN: access point network	
	PDP_ADDR: user designated IP address (optional)	

## 2.8.2 +CGACT: activate/deactivate PDP

Description	This command is used to activate/deactivate PDP settings.	
Syntax	AT+CGACT= [ <state> [, <cid> [, <cid> [,]]]]</cid></cid></state>	
Example	At + CGDCONT=1,"IP","CMNET"	
	OK	
	AT+CGACT=1,1	
	OK	
Parameters	cid: used to mark PDP parameter;	
	state: used to indicate PDP status;	
	0: deactivate;	
	1: activate;	

## 2.8.3 +CGATT: set GPRS

Description	This command is used to set GPRS service.	
Syntax	AT+CGATT=[ <state>]</state>	
Example	AT+CGATT? Check GPRS service status	
	+CGATT:0	
	OK	
	AT+CGATT=1	Set GPRS service status
	OK	
Parameter	state:	
	0: detach	
	1: attach	

## 2.8.4 +CGCLASS : GPRS device class

Description	This command is used to check GPRS device levels.	
Syntax	AT+CGCLASS=[ <class>]</class>	
Example	AT+CGCLASS? Check GPRS device levels.	
	+CGCLASS:"B"	
	OK	
Parameter	class:	
	B: support Class B	
	CG :support GPRS only	
	CC: support circuit exchange only	

## 2.9 ZTE Exclusive Commands

## 2.9.1 +ZGPIO: read/write GPIO

Description	This command is used to set input/output interface and read/write GPIO value.	
Syntax	AT+ZGPIO= <flag>,<index>,<value></value></index></flag>	
Example	AT+ZGPIO=0,5 ( read )	
	+ZGPIO: 0	
	OK	
	AT+ZGPIO=1,22,1 ( write )	
	OK	
Parameter	<flag> :</flag>	
	0 : read	
	1 : write	
	<index> : Index for GPIO to read/write;</index>	
	<value> :</value>	
	0 : I/O set as 0;	
	1 : I/O set as 1;	
Remarks	Only GPIO5, GPIO22 provided to users for operation.	

#### 2.9.2 +ZSTR: check module's status

Description	This command is used to check the module's operation status;	
Syntax	AT+ZSTR= <status> +ZSTR: <status>,<value></value></status></status>	
Example	AT+ZSTR=1 Check initialization status	
	AT+ZSTR=2	Check network status
	AT+ZSTR=?	Check the list of parameters
Parameters	<pre><status> 1:No meaning, input AT+ZSTR=1, and display ZSTR: 1,2。 2: network status. <value> 0:network unavailable; 1:network available; 2: no meaning.</value></status></pre>	

## 2.9.3 +ZGETICCID: set ICCID

Description	Read ICCID in SIM card	
Syntax	AT+ZGETICCID	
Example	No parameter	
Descriptions of	+ZGETICCID:89860042190733578148 Description: ICCID value as	
returned	89860042190733578148	
values	OK	

# 2.9.4 +ZCSQ: set auto display CSQ

Description	This command can be used to set a threshold value <num>. As the RSSI is larger</num>		
	than the threshold value, the module will send +CSQ at the COM port.		
	Note:		
	Note: the threshold value <num< td=""><td>I&gt; does not refer to the RSSI. The threshold value</td></num<>	I> does not refer to the RSSI. The threshold value	
	is identical to the <rssi> disp</rssi>	played by the command AT+CSQ. Besides, the	
	command would affect RI state	tus. Please pay attention and avoid mixing with	
	incoming call indication.		
Syntax	AT+ZCSQ = <num></num>		
Example	AT+ZCSQ=5	+CSQ: 24,0	
		OK	
	AT+ZCSQ?	5	
		ОК	
	AT+ZCSQ=?	+ZCSQ: (0-32)	
		OK	
Parameter	<num> range: 0 ~ 32</num>		
Remarks	As the RSSI is larger than the threshold value <num>, the module would pull RI</num>		
	pin (ME3000 Pin15) down 50ms and display the current RSSI value in the syntax		
	of "+CSQ: <rssi>,<ber>" while restoring RI pin's high level.  If the threshold value <num> is equal to 0, stop reporting the signal quality.  If the threshold value <num> default value is 0, the module will auto restore to the</num></num></ber></rssi>		
	default settings after restart.		
	When checking RSSI, if return "+CSQ:99,99"; 99 doesn't represent the actual <rssi> value, but the valid <rssi> value which is not yet obtained.</rssi></rssi>		

# 2.9.5 +ZEDT: set DTR inspection mode

Description	This command is used to set the inspection mode for DTR pin.		
	There are two inspection modes: A) the module reads DTR pin's level; as DTR pin		
	is at low level, the module think DTR signal is valid, namely the module is		
	effectively connected with DTE device; otherwise, the module is disconnected with		
	DTE device; B )the module doesn't read DTR pin's level; and the DTR signal would		
	be always valid, namely the module will be always connected with DTE device		
	effectively.		
Syntax	AT+ZEDT = <num></num>		
Example	AT+ZEDT=1	OK	
	AT+ZEDT?	+ZEDT: 1	
		OK	

	AT+ZEDT =?	+ZEDT: (0,1)
		OK
Parameter	<num> range: 0 ~ 1</num>	
Remarks	The command "+ZEDT" is mainly used to set the module at low power consumption mode; under low power consumption mode; the module could intermittently turn off the RF components, besides, the MCU、DSP、PLL, external clock at digital baseband part can enter dormant mode, and 26MHz main crystal oscillator would enable/disable regularly to reduce the module's power consumption.	
	Whether or not the module can enter low power consumption mode depends on the following factors: 1) Key (including ON/OFF key) event and exception/external interruption; 2) whether or not receive valid DTR signal; 3) OTA event (e.g., receive text message, incoming call, etc.)	
	In order to make the module enter low power consumption mode, please use the command "AT+ZEDT?" to check the module's current settings after start-up; if returning with "+ZEDT: 0", please use the command "AT+ZEDT=1" to change the settings; If you ever use the ON/OFF jumper cap, remove it. Disconnect the CC portincluding AT port and debugging port. The module would enter the low power consumption mode after a while (1 ~ 3 minutes).	
	The default value of the setting value <num> is 0.</num>	
· ·		" would effect the status LED. After setting ould not flash. The status LED will restore normally ugh the command AT+ZEDT=0 and restarting the

## 2.9.6 +ZDSLEEP: 32KHz Deep sleep mode

Description	This command is used to enable/disable 32KHz sleep mode.	
Syntax	AT+ZDSLEEP= <mode></mode>	
Example	AT+ZDSLEEP=1 Enable sleep mode	
	AT+ZDSLEEP=0	Disable sleep mode
Parameter	<mode></mode>	
	0: disable sleep mode	
	1: enable sleep mode	
Remarks	After entering sleep mode, awaken through DTR. Valid at high level.	

## 2.9.7 +CUSD: send USSD data

Description	Send USSD data ( ASCII code )
Syntax	AT+CUSD=n,0,"str",dcs
Parameter	1. <n> :</n>

1			
	> 0 disable result code presentation in the TA		
	> 1 enable result code presentation in the TA		
	> 2 cancel session		
	2. <str></str>		
	string type: USSD string (see 3GPP 27.007 for use)。		
	Please use ASCII code.		
	3. <dcs></dcs>		
	integer type: 3GPP 23.038 Cell Broadcast Data Coding	Scheme。	
	Recommended to use 15.		
Descriptions	+CUSD: <m>[,<str>,<dcs>]</dcs></str></m>		
of returned			
value	ОК		
	Among:		
	<m> 0 no further user action required</m>		
	1 further user action required		
	2 USSD terminated by network		
	3 other local client has responded		
	4 operation not supported		
	5 network time out		
Example	AT + CUSD=1,0,"*100#",15	Connect *100#, and	
	+CUSD:	returned information is	
	1,"6b228fce4f7f75285e7f4e1c79fb52a85feb4fe1003	within"", and the encoding	
	100300030ff01000a003165b095fb59296c14000a00	method is UCS2.

# 2.9.8 +ZRINGPINMODE: set RING PIN signal mode

Description	This command is used to set RING PIN signal mode.	
Syntax	AT+ZRINGPINMODE= <n></n>	
Parameters	<ul> <li>N&gt;</li> <li>O: RING PIN is at original signal mode; the pin is at low level upon incoming call; and is at high level during other time. No change (remaining to be at high level) upon the receipt of text message.</li> <li>I: RING Pin is at new signal mode; The PIN generates 1s low level and 4s high level upon an incoming call, until the call is ended or terminated; and is at high level during other time. Generate 1s low level pulse upon the receipt of</li> </ul>	
Example	new messages; maintain high level during other time.  AT+ZRINGPINMODE = 0 Set RING pin as original mode	
	AT+ZRINGPINMODE = 1	Set RING pin as new signal mode
Descriptions of returned values	No returned value	

## 2.10 Network Parameter Commands

## 2.10.1+ZPNUM: set APN, username and password

Description	This command is used to set the operator's APN, username and password.	
Syntax	AT+ZPNUM= <apn>,<user>,<pwd></pwd></user></apn>	
Example	AT+ZPNUM="cmnet", "user", "pwd"	
	ОК	
	AT+ZPNUM?	Check current APN,USER,PWD settings
Parameter	APN:GPRS APN provided by operator;	
	USER: username	
	PWD: password	
	APN: USER, PWD is a kind of character "string".	

## 2.10.2+ZPPPOPEN: open GPRS connection

Description	This command is used to open GPRS	connection.
Syntax	AT+ZPPPOPEN	
Example	AT+ZPNUM="cmnet", "user", "pwd"	
	OK	
	AT+ZPPPOPEN	
	+ZPPPOPEN:CONNECTED	
	OK	
	AT+ZPPPOPEN	
	+ZPPPOPEN: ESTABLISHED	
	OK	

## 2.10.3+ZPPPCLOSE: close GPRS connection

Description	This command is used to close GPRS	S connection.
Syntax	AT+ZPPPCLOSE	
Example	AT+ZPPPCLOSE	
	OK	
	AT+ZPPPCLOSE	
	+ZPPPCLOSE: DISCONNECTED	
	OK	

#### 2.10.4+ZIPGETIP: check current IP address

Description	This command is used to obtain the IP address.
Syntax	AT+ZIPGETIP

Example	AT+ZIPGETIP	Obtain the module's IP address
	+ZIPGETIP: *.*.*	
	ок	
Parameter	* is a value from 0 ~ 255;	

## 2.10.5 +ZDNSSERV: set DNS IP address

Description	This command is used to set the IP address of the DNS.	
Syntax	AT+ZDNSSERV= <ip1> , <ip2></ip2></ip1>	
Parameter	<ip1>: the IP address of main DNS;</ip1>	
	<ip2>: the IP address of sub DNS;</ip2>	
Example	AT+ZDNSSERV="211.136.20.203","211.136.18.171"	Set DNS IP address
	ОК	
	AT+ZDNSSERV="211.136.20.203",""	
	ОК	
	AT+ZDNSSERV?	Check DNS IP address
	211.136.20.203	
	211.136.18.171	
	OK	
Remarks	When setting the server, you must mandatorily set the main DNS server and	
	selectively set the secondary DNS server. For IP settings, the parameter can't exceed	
	255.	

## 2.10.6 +ZDNSGETIP: obtain Internet Domain name's IP address

Description	This command is used to obtain Internet Domain name's IP address.	
Syntax	AT+ZDNSGETIP= <domain name=""></domain>	
Parameter	<domain name=""> : Internet domain name;</domain>	
Example	AT+ZDNSGETIP="WWW.163.COM"   Obtain IP address	
	202.108.09.32	
	202.108.09.33	
	OK	

57

## 2.11 TCP Link Commands

## 2.11.1+ZIPSETUP: Set up TCP server link

Description	This command is used to send data to a bundled TCP server.	
Syntax	AT+ZIPSETUP= <n>,<ip>,<m></m></ip></n>	
Example	AT+ZIPSETUP=1,61.144.216.219,2332 Connect to TCP server.	
	+ZIPSETUP:CONNECTED	
	ОК	
Parameter	N: the channel No. of TCP links, ranging from 0 to 4; support 5 TCP links with 5	
	different IP addresses and ports;	
	IP: IP value of one target address, *.*.*. * range: 0 ~ 255.	
	M: port number;	
Remarks	MTK only supports 6 sockets online at the same time. The total number of TCP	
	and UDP links can't exceed 6 when estal	blishing the links.

## 2.11.2 +ZIPSEND: send TCP data to target address

Description	This command is used to connect the target server.	
Syntax	AT+ZIPSEND= port, length <cr></cr>	
	Send data after prompt with '>'	
Example	AT+ZIPSEND=1,10	Send data to TCP server after
	>abcdefghij	successfully connecting the server. Send
	+ZIPSNED:OK	10 bytes: abcdefghij
	OK	
Parameter	port: the channel number of TCP links;	
	length: data length ( support up	to 1000 bytes, and support 0x00~0xff
	transmitting).	

#### 2.11.3 +ZPPPSTATUS: check GPRS connection status

Description	This command is used to check GPRS link status.	
Syntax	AT+ZPPPSTATUS	
Example	AT+ZPPPSTATUS	Check GPRS link status
	+ZPPPSTATUS: ESTABLISHED	
	OK	
	AT+ZPPPSTATUS	Check GPRS link status
	+ZPPPSTATUS: DISCONNECTED	
	OK	

## 2.11.4 +ZIPCLOSE: close TCP link

Description	This command is used to close TCP link.	
Syntax	AT+ZIPCLOSE= <n></n>	
Example	AT+ZIPCLOSE=1 Close TCP link.	
	+ZIPCLOSE:OK	
	OK	
Parameter	N: the number of TCP links and the value is 1;	

## 2.11.5+ZIPSTATUS: check current TCP link status

Description	This command is used to check the status of current TCP link.	
Syntax	AT+ZIPSTATUS= <n></n>	
Example	AT+ZIPSTATUS=1 Check the current TCP link status	
	+ZIPSTATUS: ESTABLISHED	
	OK	
Parameter	ESTABLISHED: TCP link established.	
	DISCONNECTED: TCP link disconnected.	

#### 2.11.6 +ZIPRECV: receive data from current data link

Description	This command is used to receive data asynchronously.	
Syntax	+ZIPRECV:N,LEN, <data></data>	
Example		
	+ZIPRECV:1,5,abcde Received 5 data abcde from No.1 TCP	
		data link
Parameter	N: the number of TCP links and the value is 1;	
	LEN: length of received data;	
	DATA: received data	

## 2.12 UDP Link Commands

## 2.12.1+ZIPSETUPU: set up UDP server link

Description	This command is used to bundle with the UDP server link.		
Syntax	AT+ZIPSETUPU= <n>,<ip>,<m></m></ip></n>		
Example	AT+ZIPSETUPU=1,61.144.216.219,2332	The UDP server's bundled address is	
	OK	61.144.216.219, with the port no.	
		2332.	
		Return with bundling succeeded.	
Parameter	N: the channel No. of UDP links, ranging from 0 to 4; support 5 UDP links with 5		
	different IP addresses and ports;		
	IP: IP address of target server; *.*.*. * ranges from 0 ~ 255.		
	M: port number.		
Remarks	MTK only supports 6 sockets online at the same time. The total number of TCP		
	and UDP links can't exceed 6 when establ	and UDP links can't exceed 6 when establishing the links.	

#### 2.12.2+ZIPSENDU: send data to UDP server

Description	This command is used to send data to the bundled UDP server.	
Syntax	AT+ZIPSENDU= port, length <cr></cr>	
	Send data after prompt with '>'.	
Example	AT+ZIPSENDU=1,10	Send data to UDP server after
	>abcdefghij	successfully connecting the server. Send
	+ZIPSNEDU:OK	10 bytes: abcdefghij
	OK	
Parameter	port: the channel number of UDP links	s;
	length: data length (support up	to 1000 bytes, and support 0x00~0xff
	transmitting).	

#### 2.12.3+ZIPSTATUSU: check UDP status

Description	This command is used to check current UDP link status.	
Syntax	AT+ZIPSTATUSU= <n></n>	
Example	AT+ZIPSTATUSU=1 Check the No. 1 UDP status	
	+ZIPSTATUSU: ESTABLISHED The No. 1 UDP is in use	
	OK	
Parameter	ESTABLISHED: UDP already ESTABLISHED.	
	DISCONNECTED:UDP already disconnected	

## 2.12.4+ZIPCLOSEU: close UDP link

Description	This command is used to close the designated UDP link.			
Syntax	AT+ZIPCLOSEU= <n></n>			
Example	AT+ZIPCLOSEU=1 Successfully close the No. 1 UDP link +ZIPCLOSE:OK			
	OK Prompt that the No.1 UDP link closed.			
Parameter	N: the channel number of UDP links; representing the channels to be closed, ranging from 0 to 4.			

## 2.12.5+ZIPRECVU: receive UDP data

Description	This command is used to receive UDP data from UDP server.			
Syntax	+ZIPRECVU:N,LEN, <data></data>			
Example				
	+ZIPRECVU:1,5,abcde	Received 5 data abcde from the No.1		
		UDP data link		
Parameter	N: the channel number of UDP links, ranging from 0 to 4;			
	LEN: received data length;			
	DATA: received data;			
	(The size of each UDP package shall not exceed 1500 bytes, otherwise, error			
	occurs)			

## 2.13 Server Commands

# 2.13.1+ZTCPLISTEN: set port monitoring

Description	This command is used to enable/disable port monitoring function.				
Syntax	AT+ZTCPLISTEN= <on off="">,<portnum></portnum></on>				
	AT+ZTCPLISTEN ?				
Parameter	On/off				
	1:start listening				
	2:stop listening				
	portNum				
	the listening port num				
	If <on off=""> is 2, please set this parameter</on>	as 0.			
Example	AT+ZTCPLISTEN=1,1174	Monitoring port 1174			
	OK				
	at+ztcplisten?	Check monitoring status			
	+ZTCPLISTEN:1,1174				
	OK				
	AT+ZTCPLISTEN=2,0	Stop monitoring			
	OK				
	+ZTCP(P): INCOMING CONNECT	Indicating one monitoring to one external			
	ACCEPTED	connection, and the connection is accepted.			
Note	One port can be monitored currently, and only two connections are allowed on each				
	port;				
	2. Prior to the monitoring, please firstly use AT+ZPPPOPEN to open the PPP link;				

# 2.13.2 +ZTCPSENDP: send data through passively opened link

Description		This command is used to send data through (monitored) passively opened		
		link.		
Syntax		AT+ZTCPSENDP= <channel>,<n></n></channel>		
Parameter		<channel>: the sign of connected client ends;</channel>		
		<n>: the length of data to send</n>		
Descriptions	of	Input AT command according to the above syntax, press carriage return to		
returned value		display ">". In this case, you can input the data to transmit. When inputting		
		(size+1) data (it can be any data, 0x0d recommended), it will trigger the		
		transmitting process.		
Example		AT+ZTCPSENDP=10	Send 10 characters through the	
		>1234567890	monitored link.	
		+ZTCPSEND(P):OK		
		OK		
Note		Prior to the use of this command, the monitored connection must be		
		established.		

## 2.13.3 +ZTCPCLOSEP: close monitored connection

Description		This command is used to close the monitor	ored con	nectio	on.	
Syntax		AT+ZTCPCLOSEP= <channel></channel>				
Descriptions	of	OK: connection closed				
returned value		ERROR: link not existed or other error				
Example		at+ztcpclosep	Close	the	No.1	connection
		+ZTCPCLOSEP:OK	monito	red		
		OK				
Note		Prior to the use of this command, the	monito	red c	onnecti	on must be
		established.				

# 2.13.4 +ZTCPRECV(P): receive data report

Description	This command is used to receive data report								
Syntax	+ZTCPRECV(P): <channel>,<datalength>,data</datalength></channel>								
Parameter	Channel: upon multiple connections, mark the connection through which transmits								
	the data.								
	dataLength: the length of received data								
	Data: received data								
Example	+ZTCPRECV(P):1050,	1050 characters received							
	78901234567890123456789012345678901234								
	56789012345678012345678901234567890123								
	45678901234567890123456789012345678901								
	23456789012345678012345678901234567890								
	12345678901234567890123456789012345678								
	90123456789012345678012345678901234567								
	89012345678901234567890123456789012345								
	67890123456789012345678012345678901234								
	56789012345678901234567890123456789012								
	34567890123456789012345678012345678901								
	23456789012345678901234567890123456789								
	01234567890123456789012345678012345678								
	90123456789012345678901234567890123456								
	78901234567890123456789012345678012345								
	6789012345678901234567890123								
	45678901234567890123456789012345678012	45678901234567890123456789012345678012							
	34567890123456789012345678901234567890								
	12345678901234567890123456789012345678								
	01234567890123456789012345678901234567								
	89012345678901234567890123456789012345								
	67801234567890123456789012345678901234								
	56789012345678901234567890123456789012								

34567801234567890123456789012345678901
23456789012345678901234567890123456789
01234567801234567890123456789012345678
90123456789012345678901234567890123456
78901234567801234567890123456789012345
67890123456789012345678

# 2.13.5 +ZTCPSTATUSP: check passively opened link

Description	This command is used to check if there	e is any passively opened link.
Syntax	AT+ZTCPSTATUSP= <channel></channel>	
Descriptions	f +ZTCPSTATUS(P):DISCONNECT (	One passively link not existed
returned value	+ZTCPSTATUS(P):CONNECT	One passively link existed
Example	at+ztcpstatusp=0	No passively opened
	+ZTCPSTATUS(P):DISCONNECT	link
	OK	
	at+ztcpstatusp	The current monitoring
	+ZTCPSTATUS(P):DISCONNECT	port does not start
	OK	working.

# 2.13.6 +ZIPTIMEOUT: set the timeout for connecting the server & sending data

Description		This command is used to set the timeout for co	onnecting the server and
		sending data as the module works as the client e	nd.
Syntax		AT+ZIPTIOMEOUT= <connect_timeout>,<send_c< td=""><td>data_timeout&gt;</td></send_c<></connect_timeout>	data_timeout>
Description	of	connect_timeout: connection timeout;	
parameters		send_data_timeout: sending data timeout. If the i	module does not send out
		the data within the specified time, it might think	k that there is something
		wrong with the server or network and close the	connection. (The module
		works as the server and client end)	
Descriptions	of	OK setting succeeded	
returned value		ERROR setting failed	
Example		AT+ZIPTIMEOUT=?	Check the range of
		+ZIPTIMEOUT:(5-120),(5-18000)	timeout value
		OK	
		AT+ZIPTIMEOUT=30,60	Set the timeout
		OK	
		at+ziptimeout?	Check the range of
		+ZIPTIMEOUT:30,60	current timeout
		OK	

# 2.13.7 +ZTCPTIMEOUT: set the timeout for receiving data

Description		This command is used to set the timeout for receiving data.		
Syntax		AT+ZTCPTIMEOUT= <recv_data_timeout></recv_data_timeout>		
Description	of	If the module does not receive the data within	the specified time, it will	
parameters		close the connection, otherwise, the number of	connections exceeds the	
		limit, other client-ends can't be connected.		
		The default value is 0 and it means the timeout is	no needed.	
Descriptions	of	OK Succeeded		
returned value		ERROR Failed		
Example		at+ztcptimeout=?	Check the range of	
		+ZTCPTIMEOUT:(0-18000)	timeout value	
		ОК		
		at+ztcptimeout=30	Set the timeout	
		OK		
		at+ztcptimeout?	Check the range of	
		+ZTCPTIMEOUT:30	current timeout	
		OK		

# 2.14 FTP Commands

# 2.14.1 ZFTPLOGIN: log in FTP server

Description	This command is used to log in the FPT server.					
Syntax	AT+ZFTPLOGIN= <ip>,<port>,<username>,<password></password></username></port></ip>					
Description	IP: server's IP address;					
of	PORT: server's FTP port number, 21 by default					
parameters	( Note: according to RFC959, it's advised to se	t the port no. as 21)				
	Username: username used to log in FTP server	•				
	Password: password used to log in FTP server					
Example	at+zftplogin=183.37.36.5,21,test,test	Logged in FTP server				
		successfully				
	OK					
	+ZFTPLOGIN:OK					
	at+zftplogin=183.37.36.5,21,test,test Log in FTP server,					
	connection timeout					
	OK					
	+ZFTPLOGIN: CONNECT FAIL					
Remarks	1. As long as the syntax of command is correct, return OK. However, this					
	doesn't mean logged-in successfully. The log-in is successful only after					
	+ZFTPLOGIN: OK is returned.					
	2. Prior to logging in FTP server, you must oper	i PPP.				

## 2.14.2 ZFTPTYPE: set FTP file type

Description	This command is used to set the type of FTP file.		
Syntax	AT+ZFTPTYPE= <type></type>		
Description	TYPE: file type		
of	1: ASCII		
parameters	2: Binary		
Example	at+zftptype=1	Set the file type as text	
		mode	
	OK		
	+ZFTPTYPE:OK		
	at+zftptype?	Check the settings of file	
		type	
	+ZFTPTYPE:1		

Remarks	If you upload or download the files for the first time, you have to set the file
	type and perform relevant operation. If you need not change the file type,
	you can ignore the settings.

# 2.14.3 ZFTPUPLOAD: upload files

Description	This command is used to upload files to FTP se	rver.
Syntax	AT+ZFTPUPLOAD= <dir&filename>,<put_mode>,<size></size></put_mode></dir&filename>	
Description	dir&filename: file directory or file name	
of	put_mode: Upload operation mode:	
parameters	1: STOR mode: create the file on the server ar	nd write the data. If the file
	exists already, cover the original file.	
	2: APPE mode: if the file doesn't exist on the server, create it. If it exists,	
	attach the data at the end of the file.	
	Size: size of file;	
Example	at+zftpupload=test1.txt,2,511	Upload a txt file to the
		server with the file's
	>	name test1.txt and size of
	OK	511 bytes.
	+ZFTPUPLOAD:OK	
Remarks	The data length sent each time does not exceed 4K byte. If you want to	
	write a large file, use STOR mode and then APPE mode; Prior to the	
	uploading, you'd better set the file type.	

## 2.14.4 ZFTPDNLOAD: download files

Description	This command is used to download files from FTP server	r.	
Syntax	AT+ZFTPDNLOAD= <dir&filename>,<content info="" or="">,<c< td=""><td>output_interval&gt;</td></c<></content></dir&filename>	output_interval>	
Description	dir&filename: file directory or file name		
of	Content or Info: specify what you want to obtain is Conte	nt or Info:	
parameters	1: obtain file contents		
	2: obtain file or designated directory information		
	output_interval: interval (1500 byte each time) as the module outputs		
	through COM port. Take the value from 0 ~ 10, with the unit of second. 0		
	represents the default value 20ms.		
Example	at+zftpdnload=test1.txt,1,4	Download a txt	
		file from the	
	OK	server with the	
		file's name	
	+ZFTPDNLOAD:Recv Start	test1.txt and	
	12345678901234567890123456789012345678901234	size of 511

## 2.14.5 ZFTPDEL: delete files

Description	This command is used to delete the files on the FTP server.	
Syntax	AT+ZFTPDEL= <dir&filename></dir&filename>	
Description	dir&filename: file directory or file name	
of		
parameters		
Example	at+zftpdel=test1.txt	Delete the file test1.txt on
		the FTP server.
	OK	
	+ZFTPDEL:OK	
Remarks	None	

# 2.14.6 ZFTPQUIT: quit FTP

Description	This command is used to quit the FTP server.	
Syntax	AT+ZFTPQUIT	
Description	None	
of		
parameters		
	at+zftpquit	Quit the FTP server
	OK	
	+ZFTPQUIT:OK	
Example		
	at+zftpquit	Quitted FTP server
		already, execute the
	FTP IS NOT LOGIN	delay command
Remarks	None	
Remarks	NOTE	

## 2.15 Relevant Audio Commands

# 2.15.1+ZCALLTONE: set pick-up tone

Description	Play/pause the pick-up tone.		
Syntax	AT+ZCALLTONE= <n></n>		
	AT+ZCALLTONE=?		
	AT+ZCALLTONE?		
Parameter	<n></n>		
	0 : pause the pick-up tone		
	1 : play 400Hz pick-up tone		
	2 : play 400Hz/25Hz pick-up tone		
	3 : play 400Hz/50Hz pick-up tone		
Descriptions of	OK		
returned value			
	+ZCALLTONE: <n></n>		
	OK		
Example	AT+ZCALLTONE=2	Play pickup tone	
	OK		
	at+zcalltone?		
	+ZCALLTONE:2		
	OK		
	AT+ZCALLTONE=0	Stop pickup tone	
	OK		
	at+zcalltone?		
	+ZCALLTONE:0		
	OK		

#### 2.15.2 +ZDTMFTONE: set ZDTMF tone

Description	Play/pause the pick-up tone.	
Syntax	AT+ZDTMFTONE= <n>,<duration></duration></n>	
	AT+ZDTMFTONE =?	
	AT+ZDTMFTONE?	
Parameter	<n></n>	
	0~9 : play DTMF tone from 0 to 9;	
	10~13 : play DTMF tone from A to D;	
	14 : play * DTMF tone;	
	15 : play # DTMF tone;	
	16 : stop playing DTMF tone ;	
	<duration></duration>	
	DTMF playing duration, unit: 20ms.	
	Value range: 0-1000。Set as 0, continue to play	

Descriptions	of	OK	
returned value			
		+ZDTMFTONE: <n> , <duration></duration></n>	
		OK	
Example		AT+ZDTMFTONE=1,0	Continue to play DTMF
		OK	tone of number key 1;
		AT+ZDTMFTONE?	
		+ZDTMFTONE:1,0	
		OK	
		AT+ZDTMFTONE=16,0	
		OK	Stop playing DTMF tone
		AT+ZDTMFTONE?	
		+ZDTMFTONE:16,0	
		OK	
		AT+ZDTMFTONE=2,100	Play DTMF tone of number
		OK	key 2 for 2s;

## 2.15.3+SPEAKER: audio channel switch command

Description	This command is used to switch between the microphone and headset.	
Syntax	AT+SPEAKER= <mode></mode>	
Example	AT+SPEAKER=0 Switch to microphone	
	OK	
	AT+SPEAKER=1	Switch to headset
	OK	
	AT+SPEAKER=?	Check status
	+SPEAKER:(0-1)	
	OK	
Parameters	<mode></mode>	
	0 : microphone(default)	
	1 : headset	

## 2.15.4 +ZMICGB: set MIC audio parameters

Description	This command is used to change MIC input channel's audio parameters.	
Syntax	AT+ZMICGB= <gain>,<bias>,<pga> //set parameters</pga></bias></gain>	
	AT+ZMICGB=?	//check parameter setting syntax
	AT+ZMICGB?	//check current parameters
Parameter	Refer to the definitions of three parameters in MIC output circuit in figure 1.	
	1. Gain:0 ~ 7. refer to the corresponding relationship between the parameter and	
	the gain;	

71

```
typedef enum L1BbcMicGainTag
{
   MIC_GAIN_0 = 0,
   MIC_GAIN_1,
   MIC_GAIN_2,
   MIC_GAIN_3,
   MIC_GAIN_4,
   MIC_GAIN_5,
   MIC GAIN 6,
   MIC_GAIN_7
L1BbcMicGain;
2. Bias: 0 ~ 7. refer to the corresponding relationship between the parameter
and the current;
typedef enum L1BbcMicBiasTag
   MIC_BIAS_CURRENT_500_UA
                                 = 0,
   MIC_BIAS_CURRENT_303_UA,
   MIC_BIAS_CURRENT_183_6_UA,
   MIC_BIAS_CURRENT_111_25_UA,
   MIC_BIAS_CURRENT_67_41_UA,
   MIC_BIAS_CURRENT_40_85_UA,
   MIC_BIAS_CURRENT_24_75_UA,
   MIC_BIAS_CURRENT_15_UA
L1BbcMicBias;
3. PGA: 0 ~ 15° refer to the corresponding relationship between the parameter
and the db value;
typedef enum L1BbcInputPgaGainTag
{
   MIC_PGA_0db0 = 0
   MIC_PGA_1db5
   MIC_PGA_3db0
   MIC PGA 4db5
   MIC_PGA_6db0
   MIC_PGA_7db5
   MIC_PGA_9db0
   MIC_PGA_10db5
   MIC_PGA_12db0
   MIC_PGA_13db5
   MIC_PGA_15db0
   MIC_PGA_16db5
```

	MIC DCA 18db0		
		, MIC_PGA_18db0	
	, MIC_PGA_19db5		
	, MIC_PGA_21db0		
	, MIC_PGA_22db5		
	}		
	L1BbcInputPgaGain;		
Descriptions	OK : parameter settings succeed;		
of returned	ERROR : incorrect parameter syntax		
value			
Example	AT+ZMICGB=0,3,12	Note: Gain: 0; Bias: 3; PGA: 12

# **3 Application Cases and Precautions**

## 3.1 SMS Application Case

```
Note: The following text marked in red should be entered;
at+cmgf=1
OK
——Set the message's input mode as text mode.
at+cmgs="13360504647"<CR>
hallo<ctrl/Z>
+CMGS: 1
OK
----Send one message. "13360504647" is the number of message recipient, and hallo is the
message text.
at+cmgw="13360504647"<CR>
goodbye<ctrl/Z>
+CMGW: 1
OK
—write a message in "SM"."13360504647" is the number of message recipient, and goodbye is the
message text. From the returned information +CMGW, we could see that the message is saved to the
index 1.
at+cpms?
+CPMS: "SM",1,50,"SM",1,50,"SM",1,50
OK
——Check the current memory. From +CPMS, we know there is a message in "SM", which is the
newly composed message.
at+cmgr=1
+CMGR: "STO UNSENT", "13360504647",
goodbye
OK
—Read this message with the index No. From the returned information +CMGR, we know that the
message is not sent. ( "STO UNSENT ").
at+cmss=1
+CMSS: 1
OK
——Send the saved message.
at+cmgr=1
```

+CMGR: "STO SENT","13360504647", goodbye OK —Read this message with the index No. From the returned information +CMGR, we know that the message has been sent. ( " STO SENT " ) at+cnmi=3,2,0,0,0 OK ——Set the status of newly received message as "Directly display but not save" +CMT: "+8615986672056","OK","07/08/27,13:23:56+32" **WESDDR** —Receive a new message, which is directly displayed but not saved. "+8615986672056" is the number of message recipient, "07/08/27,13:23:56+32" is the sending time and WESDDR is the message text. at+cnmi=3,1,0,0,0 ——" Set the status of newly received message as "Save but not display" +CMTI: "SM", 28 —Receive a new message, which is saved but not displayed. From +CMTI, we know that the message is saved in the index 28 in "SM". at+cmgr=28 +CMGR: "REC UNREAD","15986672056","07/08/27,13:36:48+32" **CDFF** OK ——Read this message with the index No. "REC UNREAD" is the status of the message. "15986672056" is the number of message recipient, "07/08/27, 13:36:48+32" is the sending time and CDFF is the message text. 3.2 Phonebook Application Case Note: The following text marked in red should be entered; at+cpbs? +CPBS:"SM",0,200 OK —Check the current memory. The default phonebook memory is" SM ". From +CPMS, we know that the current phone memory "SM" is empty.

# at+cpbw= 1,"13086672098",129,"john" OK ——Write a phone entry into current phonebook memory "SM". "1" represents save by auto searching space. "13086672098" is the telephone number, 120 is the type of phone number, and john is the name. at+cpbs? +CPBS:"SM",1,200 OK ——Check the current memory. From +CPMS, we know that the entry has been stored at the index 1 in the current phone memory "SM". at+cpbr=1 +CPBR: 1,"13086672098",129,"john" ----Read the phonebook entry. atd>1; OK ——Dial the index number in the current phonebook. atd>"john"; OK ——Dial the name from the current phonebook. ath OK ——Use ATH to hang up the call. at+cpbs=" ME " OK —Select "ME" phonebook memory. at+cpbs? +CPBS: "ME",0,18 ----Check the current memory. From +CPMS, we know that the current phone memory "ME" is empty. at+cpbw= 1,"13086672098",129,"john" ----Write a phone entry into the current phonebook memory "ME". "1" represents save by auto searching space. "13086672098" is the telephone number, 129 is the type of phone number, and john is the name. at+cpbs?

+CPBS:"ME ",1,18

#### OK

——Check the current memory. From +CPMS, we know that the entry has been stored at the index 1 in the current phone memory "ME"

#### at+cpbr=1

+CPBR: 1,"13086672098",129,"john"

OK

——Read this phonebook entry.
